Assignment: Responsive Chat Application (Frontend Only)

Build a responsive chat app frontend based on the provided user interface.

- The layout should closely match the reference image.

- The app must be fully compatible with both desktop and mobile screens.

- Include a fixed top navbar that remains visible on scroll.

- Add a sidebar that displays all contacts. Clicking a contact should open the corresponding chat conversation (chat wall).

- Implement dummy chat functionality using JavaScript (e.g., predefined or random bot replies).

Reference:
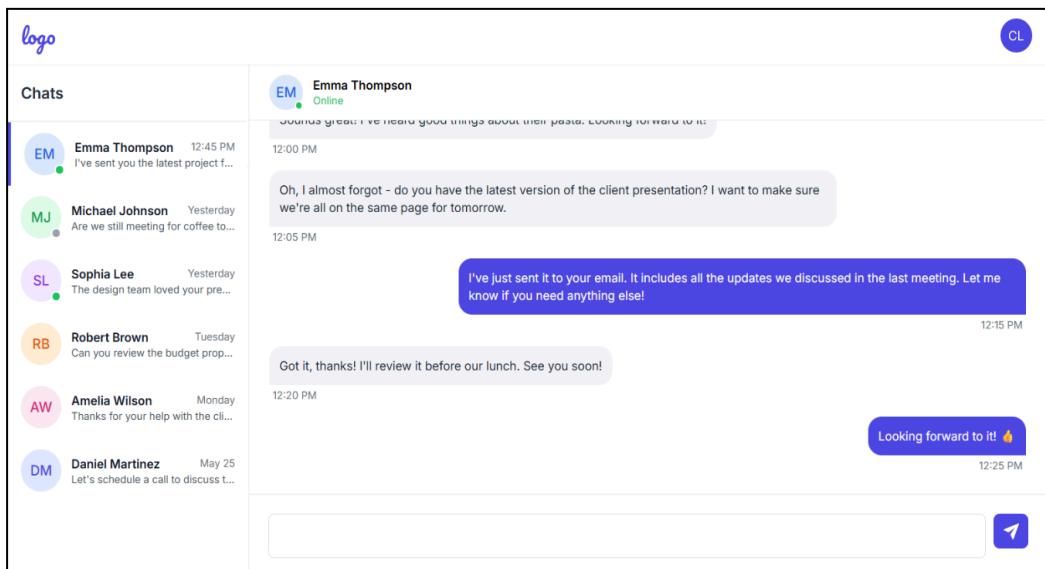

Bonus:

- **Tech stack** - Using NextJs in this project is a plus.
- Typing animation.
- Message status (Sent, Received).
- Chat message transition animations.
- Smooth sidebar collapse.

Submission Format:
Please host your application on Netlify or Vercel and share the link of the hosted application. Also share the link to the respective github repository.

Note: *You will be asked to present and explain your application in the interview.*
